Full Stack Engineer

Full stack engineer with expertise in JavaScript, Node.js, and React, backed by a unique background in automotive locksmithing and business management. Transitioned into software engineering to develop responsive, scalable, and maintainable applications. Eager to tackle new challenges and elevate site functionality to the next level.

Technical Skills

JavaScript | HTML | CSS | React.js | Node.js | Express.js | MongoDB | JSON | OOP | REST API | React Router |

Technical Projects

What to Wear | [Github](#) | [Demo](#)

A full stack project built to help users decide what to wear based on weather conditions.

- Front end developed in React.js, resulting in faster rendering and smoother user experience
- Backend developed using Express.js and MongoDB as a database, achieving safe storage for user data
- Uses JWT for authentication and authorization, and storing JWT token to keep user logged in
- Responsive design, deployed on Google Cloud

News Explorer | [Github](#) | [Demo](#)

Full stack app to search for news, on topics that interest the user, with the ability to save the news.

- Developed front end using React.js, achieving efficiency and scalability
- Backend created using Express.js and MongoDB
- Fully responsive design, with a profile page to see saved news

Around the US | [Github](#) | [Demo](#)

Front end app build to share beautiful pictures of US nature amongst users.

- Developed using semantic HTML5, CSS3, and JavaScript resulting in lightweights and faster load times
- Responsive design, making it usable on different screen size devices
- Implemented API calls to external server to add, delete, and like pictures

Professional Experience

Business owner and Locksmith, Swift Car Keys, Brooklyn

01/24 - Present

Launched a locksmithing business from the ground up and grew it into a profitable enterprise.
